ANALYTICS

De-anonymise the blockchain with risk and fraud insight into your blockchain and digital asset transactions.

- Manage and monitor risk scores for individual addresses and clusters, aggregated by source and transaction.
- Identify tainted coins by tracing the source of funds through detailed transaction visualisation.
- Monitor addresses with updates and notifications in realtime.
- Run detailed risk reports against blockchain transactions, including source of funds.
- Integrate Analytics into your existing systems or combine it with other products in the Tessier portfolio.

Key Features

- Address and cluster labelling
- User and permission management
- Configurable scoring algorithms
- Bulk upload tagging information
- Add custom metadata to clusters, addresses and transactions
- Trace tainted coins
- Realtime updates and notifications
- API access including call-back notifications
